SUMMARY

As a third-year Information Technology student at Posts and Telecommunications Institute of Technology (PTIT), I am a dedicated Backend Developer with a strong foundation in Node.js, NestJS, and Java. I have successfully delivered multiple projects, ranging from food delivery applications to network configurations. I am passionate about building high-performance, scalable backend systems and am committed to mastering modern software architecture and containerization technologies to provide significant value to professional engineering teams.

WORK EXPERIENCE

Feb 2024 - June 2024 **GM Solutions Joint Stock Company**

Backend Intern - (Java/Spring boot)

Developed RESTful APIs for a notification system, implementing **GET** (retrieval), **POST** (creation), and **PUT** (status updates) using **Java Spring Boot**.
Initialized project structures and managed development workflows using **Git** and **Docker** for containerization.
Analyzed functional requirements and collaborated with mentors to deliver technical solutions within strict deadlines.
Resolved backend bugs and optimized system stability through proactive debugging and code reviews.

INDIVIDUAL PROJECT

Jan 2026 - Present **Job Recruitment Platform**

Backend

Architected a scalable recruitment backend using **NestJS** and **MongoDB (Mongoose)**, implementing **Clean Architecture** with secure **Bcrypt** encryption and **JWT** authentication.
Engineered efficient data schemas and performed complex queries using **Mongoose ODM**, optimizing data retrieval for job listings, resumes, and user profiles.
Implemented server-side Pagination and **Advanced Filtering** logic to handle high-volume data requests while maintaining system performance.
Developed Role-Based Access Control (RBAC) to manage distinct permissions for candidates, recruiters, and administrators.
Standardized API responses through **Global Interceptors** and **Exception Filters**, ensuring a consistent and reliable communication layer for the frontend.

Sept 2025 - Dec 2025 **Food Ordering App**

Full-stack

Backend: Developed a robust API system using Node.js for ordering, order history, and cart management.
Frontend: Built user interfaces for order placement, history tracking, and voucher application.
Features: Implemented real-time order status updates and an admin dashboard for delivery and cancellation management.
Github: https://github.com/dotrungthanhCC01/App-food

Jun 2025 - Sept 2025	**Music Mobile Application** **Backend** **Developed a native Android application** using **Java**, focusing on high-performance media playback and user interaction. **Engineered core logic and data management** for User Authentication (OAuth/JWT), Profile Management, and dynamic Song Search features. **Designed and implemented intuitive UI/UX** for music discovery and authentication flows, ensuring a seamless user experience. **Optimized local data handling** and API communication to ensure fast song metadata retrieval.
2024 -	**Resort Booking Management System** **Backend** **Architected a comprehensive booking engine** using **Node.js/NestJS**, managing complex workflows for room availability, reservations, and customer check-ins. **Designed a relational database schema** (PostgreSQL/MySQL) to handle intricate relationships between room types, seasonal pricing, and booking statuses. **Implemented advanced filtering and search logic** to allow users to find available resorts based on date ranges, capacity, and amenities. **Github:** https://github.com/ITHoangLV/Booking_Resort

EDUCATION

2023 - 2027	**Posts and Telecommunications Institute of Technology (PTIT)** **Major:** Software Engineering **Current GPA:** 3.0 / 4.0

SKILLS

Languages:	**Languages:** Java, JavaScript/TypeScript, C++, C.
Backend:	Node.js, NestJS, Express.
Databases:	MongoDB, PostgreSQL, MySQL

AI EXPERIMENT

AI: Gemini, Claude, ChatGPT	Use it to research and investigate another bug when agent can not debug it
